

# About OneOrder

"OneOrder – India's first AI-first travel platform delivering a seamless, personalized journey like never before."

**OneOrder Innovation** is transforming India's travel and hospitality landscape with a bold vision to build the next-generation, AI-first online travel ecosystem. Founded in May 2025, OneOrder draws inspiration from the IATA "OneOrder" initiative, which identified the need for a simplified, customer-centric approach to airline retailing. This global standard replaces the fragmented system of Passenger Name Records (PNRs), e-tickets, and EMDs with a single, unified order record - streamlining operations for airlines and delivering seamless experiences for travelers. OneOrder fully embracing IATA standards, creating a truly unified platform that integrates cutting-edge AI, Generative-AI, and automation to offer unprecedented personalization, transparency, and convenience. The platform's customer-first design ensures intuitive interfaces, dynamic pricing, and real-time support - empowering travelers to plan, book, and manage their journeys effortlessly. With this approach, OneOrder is setting a new benchmark for exceptional, memorable travel experiences.

# Flight Schedule

AI-generated flight schedules to be prepared with option and submit to the DGCA for approval, enabling timely publication of winter and summer schedules for airline-wide distribution.
