### Cisco and LTIMindtree Expand Partnership to Deliver Next-Generation Secure Access Globally

**News Summary:**

- LTIMindtree will leverage Cisco Secure Access as its new security service edge (SSE) solution to protect its 80,000 hybrid workers with secure internet access, advanced zero trust network access and embedded AI.
- Extending its networking partnership with Cisco, LTIMindtree now offers next-generation SSE to its global clients via Cisco Secure Access.
- Clients can work jointly with both companies to adopt a broad set of cloud security functions in a single, easy-to-use dashboard with Cisco Secure Access.

**CISCO LIVE, Melbourne, Nov. 13, 2024** — Cisco (NASDAQ: CSCO), the leader in enterprise networking and security, announced that LTIMindtree is now leveraging Cisco Secure Access as its security service edge (SSE) solution to enable secure hybrid work experiences for its employees and customers worldwide.

"With Cisco's zero trust approach and embedded AI, it was an easy decision to replace our long-standing SSE solution with Cisco Secure Access," said Nachiket Deshpande, Chief Operating Officer & Whole-time Director, LTIMindtree. "We were able to quickly deploy the solution, and it now protects our hybrid workforce while delivering a better user experience and simplified IT management."

Cisco and LTIMindtree have also extended their partnership to deliver integrated Secure Access Service Edge (SASE) solutions based on Cisco technology to LTIMindtree's global client base. LTIMindtree's expertise in tailoring solutions to the specific vertical requirements is the perfect complement to Cisco's technology, including Cisco Secure Access and SD-WAN, delivering seamless and secure connected experiences for both remote and in-office workers.

"Great workplaces require great security. With AI-powered threats rising, we are combating sophisticated attackers across a more expansive landscape. Our customers need their security to operate in the background, at machine scale to make the experience seamless and secure for hybrid workers," said Jeetu Patel, Executive Vice President and Chief Product Officer, Cisco. "LTIMindtree's rapid deployment of Secure Access is a great testament to Cisco's platform strategy and differentiation. Together with our partners, we are changing what user protection means for a modern workplace."

With Cisco Secure Access, decisions about how users connect to applications are handled behind the scenes via a unified agent, so users get to what they want more quickly. With low-latency connections and transparent identity-based authentication, users are more secure with less hassle. For IT organizations, Cisco Secure Access provides an easy pathway to zero trust and zero trust network access (ZTNA), while also simplifying operations with a unified console and AI guidance. Secure Access is part of the Cisco Security Cloud, its unified, AI-driven, cross-domain security platform.

### Secure Access, Seamless Experience: Safeguarding Remote Work at Scale with Zero Trust

**LTIMindtree**

**Industry:** Technology Consulting and Digital Solutions

**Location:** Mumbai, India

**Organization:** 84,000+ employees, 107 office locations across 40+ countries

**Solution:** Cisco Secure Access

LTIMindtree is a leading global technology consulting and digital solutions company focused on delivering transformation solutions across various industries. With 84,000+ employees serving customers across 40+ countries, the \$4 billion company leverages domain expertise and technological prowess to help enterprises reimagine business models, accelerate innovation, and achieve sustainable growth in a convergent world.

With 84,000+ employees handling sensitive customer and business data, global consulting firm LTIMindtree faces the enormous task of balancing risk mitigation with operational efficiency. To strengthen its security posture and optimize efficiency, the company sought to fortify user and data protection by introducing granular controls to enforce zero trust principles while streamlining the user experience.

LTIMindtree set out to do more than just check the box on security tools — they wanted real, holistic protection for both their people and their data. "Attackers aren't just going after systems anymore — they're coming in through people," said Chandan Pail, Chief Information Security Officer at LTIMindtree. "That's why we needed a true zero trust approach — one that verifies every user, every device, every time. No assumptions, no shortcuts. It's how we reduce risk, stop threats from spreading, and stay secure in a hybrid world."

LTIMindtree relied on a point Security Service Edge (SSE) solution for a decade — but it was time for a change. Slow performance, patchy protection, and limited visibility made it difficult to keep pace with modern cyber threats. Challenges included:

- **IT Complexity:** Managing multiple hardware appliances and disparate security tools led to increased complexity and inefficiencies in IT operations.
- **Lack of Integration:** The previous solution was a point security product that lacked seamless integration with LTIMindtree's diverse network infrastructure, creating management inefficiencies.
- **User Frustration:** Employees faced slow network performance, inconsistent app access, and cumbersome security processes, resulting in a high volume of support tickets.
- **Security Gaps:** VPN solutions provided overly broad access to resources, lacked granular control, and made private applications vulnerable to unauthorized access.
- **Limited Zero Trust Capabilities:** The prior solution lacked the defense and depth required to address multiple zero trust principles.

Customer Story: Cisco Public

"We made the move to Cisco Secure Access because it's built for today's challenges. It brings AI-powered security that actually works with our existing network — and it keeps evolving. Cisco's pace of innovation gave us confidence we were investing in the future, not just another tool."

— Chandan Pail,  
Chief Information Security Officer, LTIMindtree

### Choosing a Unified, Scalable, and Integrated Platform Powered by AI

LTIMindtree chose Cisco Secure Access, replacing four of their existing security solutions with the single Cisco solution. Cisco Secure Access offered the company unified secure internet access, advanced zero trust network access, and infused AI capabilities to protect their hybrid workforce while delivering greater efficiency for the security teams. The scalable and integrated platform provides a single cloud-managed console, unified client, and seamless connectivity for users, enabling secure access to modern and legacy applications.

"We made the move to Cisco Secure Access because it's built for today's challenges," said Pail. "It brings AI-powered security that actually works with our existing network — and it keeps evolving. Cisco's pace of innovation gave us confidence we were investing in the future, not just another tool."

### A Rapid, Seamless, and Successful Deployment

LTIMindtree quickly and seamlessly integrated Secure Access with their IT infrastructure. Pail was impressed by the efficiency and stability of the deployment, noting that they replaced their existing solution and fully deployed Secure Access across 84,000+ employees in less than 90 days — without business disruption. He appreciated the unified solution's ease of use and speed, noting that AI components have significantly accelerated onboarding and policy rollout.

Elements of the successful implementation included:

- **Unified Platform Implementation:** A single client replaced multiple agents, simplifying user onboarding and ensuring seamless access to resources. A unified, cloud-managed console simplified policy creation and management, reducing IT complexity.
- **Zero Trust Enablement:** Granular zero trust network access policies enhanced security by granting users access to authorized resources based on their identity and device posture.
- **Protocol and Performance Optimization:** Modern protocols like MASQUE and QUIC were implemented to enhance network performance, reduce latency, and deliver a consistent user experience across legacy and modern applications.
- **Integration with Existing Systems:** The solution seamlessly integrated with LTIMindtree's existing network and IT infrastructure, including cloud-based and on-premises applications. Cisco's advanced AI-driven Insights and Digital Experience Monitoring (DEM) ensured continuous performance and security visibility.

**LTIMindtree** Enterprise Technology

## A Huge Thank You to Our Team!

Dear All,

I wanted to take a moment to share an exciting update on our strategic initiative: the rollout of the Cisco Security Service Edge (SSE).

We have been working diligently since early July 24 to transition 78,600 endpoints from ZScaler to Cisco SSE. I am happy to report that we have successfully migrated 95% of endpoints in **less than 100 days!**

I want to take this opportunity to recognize the outstanding contributions and collaboration from the Enterprise IT Team, our user group, and leadership in executing this pivotal shift towards a Cisco based web gateway solution. Each of you has played a vital role in our success. Below is a list of the contributors to this effort.

A special acknowledgment goes to **Ravindra Baleskar** (Technical Head - Web Gateway), **Sagar Ashok Chakwate** (Project Manager), **Manoj T** (Corporate Security) for spearheading the overall project. I also appreciate the invaluable support from **Nachiket Deshpande**, **Rajesh Kumar R**, **Chandan Patel**, and the **SLT** group.

Additionally, I am proud to share that our journey toward Cisco SSE adoption was featured as a case study at the recent Cisco Live event in Melbourne. Please click [here](#) to watch the video where our COO, Nachiket Deshpande, provides insights on our strategic partnership with Cisco.

Subject: Re: Follow up 7: J&J Cloud PC Issue - Escalation mail

Hi Sagar,

Sure please find the answer in green below.

Should I assume that all these issues are for users riding on ZScaler and I need to consider them for Cisco Proxy migration?

- We suspect that, When ZScaler showed we don't see the issue and round trip were good. Please consider to move the employees to Cisco Proxy.

Also, how has been the experience of users whom we migrated to Cisco Proxy?

- It was much better than before. No disconnection seen after migrated to Cisco.

Thanks & Regards,  
Harsha Sai Bachu,

Sr. Software Engineer
